ABOUT DIAMOND TOKEN

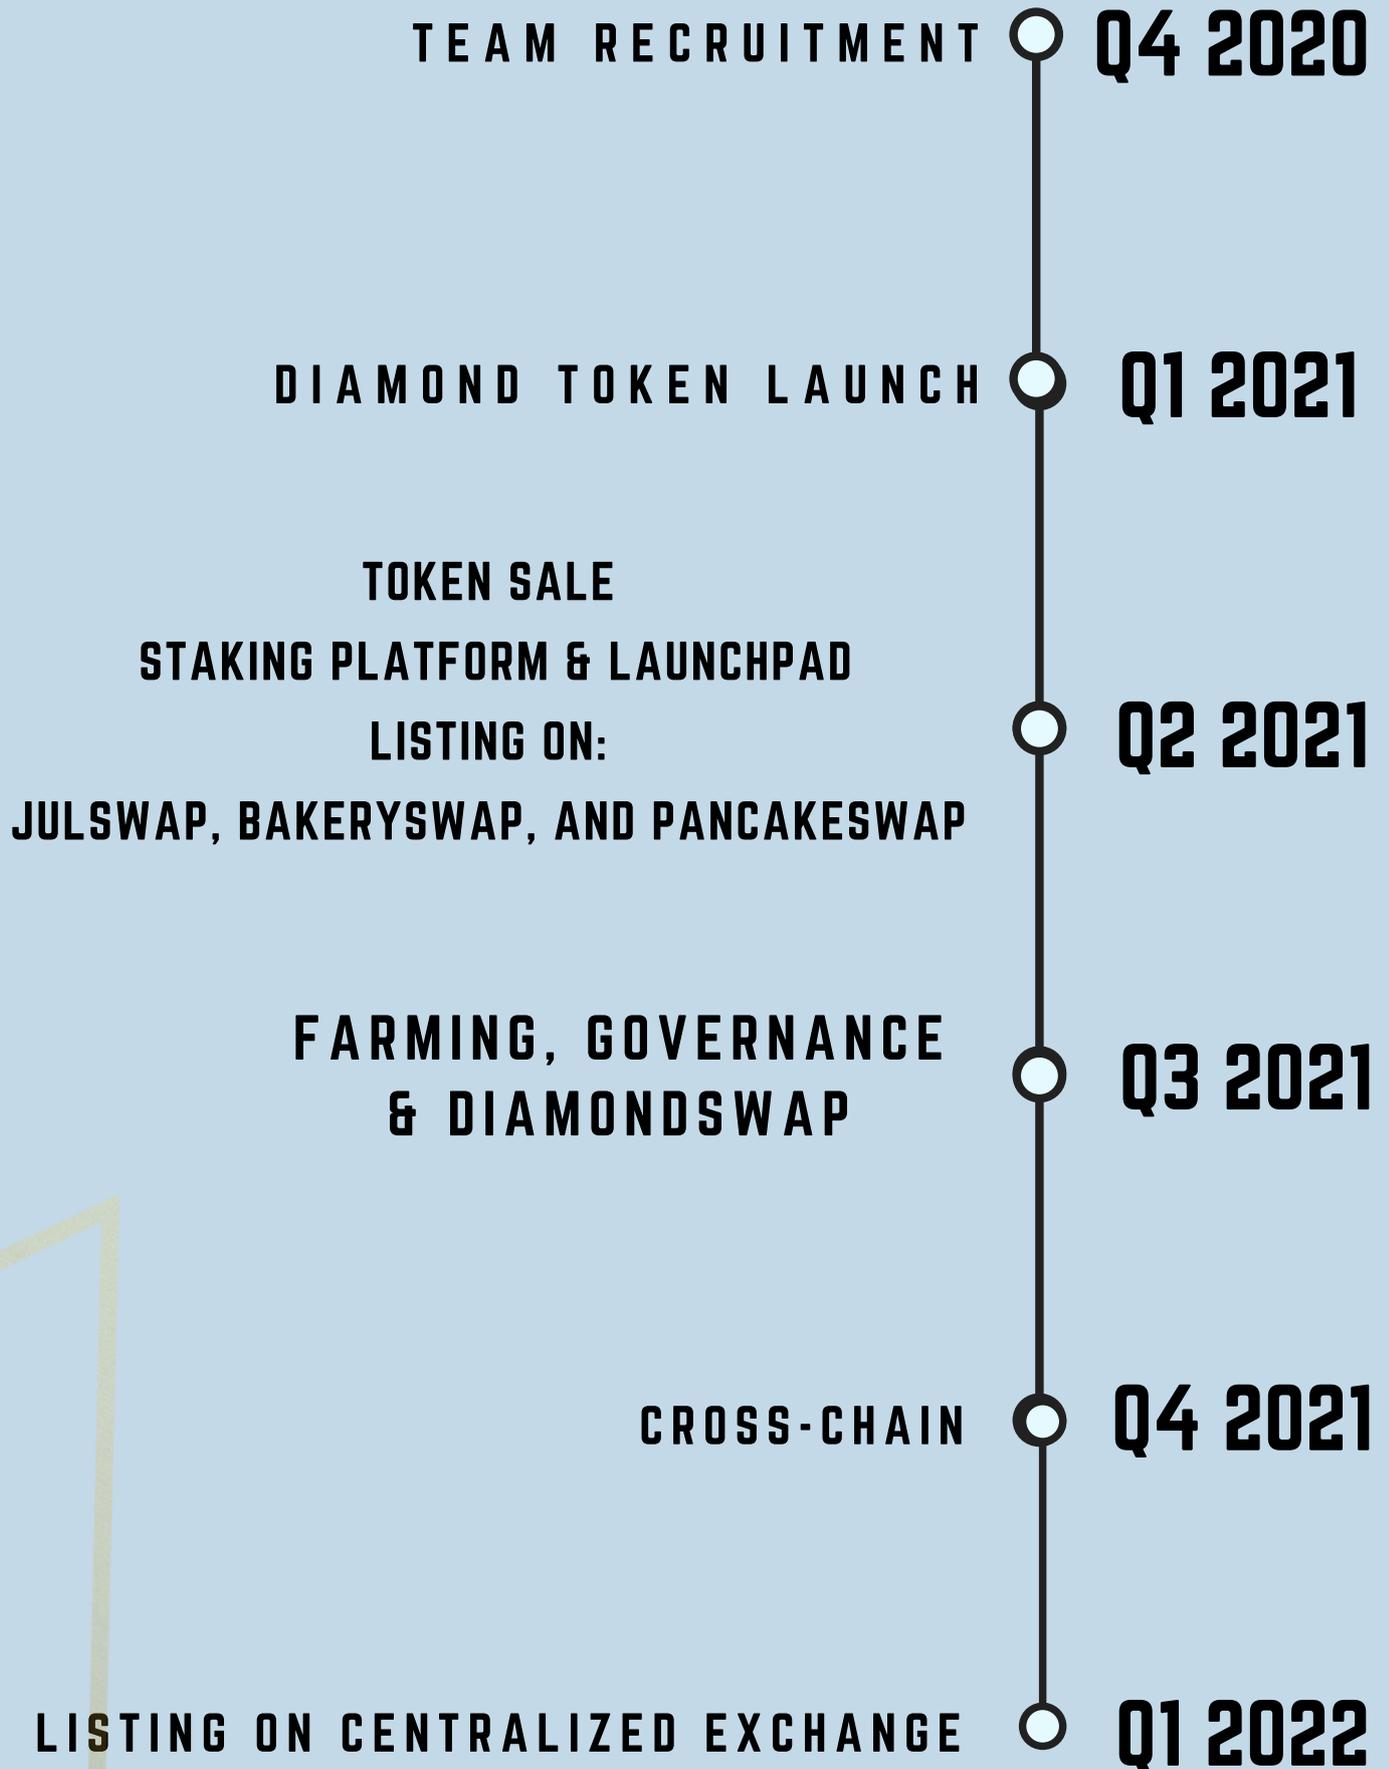

Diamond Token is a scarce cryptocurrency like diamond, it will fuel transactions on a decentralized finance platform that will redefine the existing features of current De-Fi, and ensure fair distribution of wealth to all active participants within the ecosystem on the Binance Smart Chain. Launchpad is a new technique that ushered in a new form of fundraising for blockchain and cryptocurrency projects popularly known as IDO (Initial Dex Offering) and IFO (Initial Farm Offering). These are supposed to allow just and even distribution of tokens to early investors. Sadly, the current launchpads have been overly rigged against the platform supporters, hence, creating fertile ground for undue manipulation. The system is reek of bot buyers, confusing token sales instruction, and centralization gives an unfair advantage to whales who rob other active community participants off the privilege of having ownership of new project on launchpad.

By looking inward, we have built a solution with incredible features that will guarantee equal opportunity and even distribution of wealth to all users.

The future of financing depends on openness and decentralized governance and decision making. Right to vote for or against any future proposed development in Diamond Token ecosystem cannot be negotiated, and all token holders are encouraged to make suggestions regarding features they would like to see on the platform. We invite you to help us improve decentralized financing and public blockchain in general.

ROADMAP

UNIQUE SELLING POINTS

We are convinced that bots and whales (wealthy investors) are fast dominating the De-Fi market, many of them amass significant amount of tokens in order to take over the staking pool, and farm as many tokens as possible, then dump it on other committed investors.

No investor will be able to outsmart our system, only investors who support the project will be able to profit from our token. This is the reason we are implementing a technique that will never allow any individual to buy more than one diamond token with same wallet. So, there is a limit to what investors can buy, we are going to ensure that token get into the hands of many investors and supporters.

There will be high APY for stakers and liquidity providers, this is another level to wealth re-distribution within the ecosystem.

And it will allow the marketing and product development team to have access to funds which shall be used for innovation.

It is interesting to know that most of the development funds will come from external sources, the platform would be opened to genuine projects that want to raise funds through our launchpad, and it is compulsory that they spend 10% of raised funds on buying diamond tokens. More funds will always be available to enhance the growth of the platform.

This action alone will increase demand for a token that already have unprecedented scarcity, only 5,000 diamond tokens can ever exist.

PRODUCTS

STAKING POOLS

There is going to be five pools with different lock durations and reward metrics. The longer investors lock their funds, the higher the reward, this is high yield investment to those who support the project. We believe that diamond token staking will be highly rewarding because investors are able to avoid the risk of impermanent loss that affect liquidity mining.

There will be 5 pools that will include liquidity mining pool and staking with varying APY ranging from 50 to 120 percentage, and staking will have different lock periods between 5 to 30 days.

DIAMOND LAUNCHPAD

This initiative is focused on adding value to Binance Smart Chain, we will create support for new projects that meet all our criteria.

CURRENT PROBLEM

Every week, dozens of projects are launched on the Binance chain, and many of them are unable to gain traction due to lack of important infrastructure and initial liquidity. Also, the recent scam (also known as rug pulling) on the BSC could spell doom for the ecosystem, as past unpleasant experiences may discourage investors from investing in new projects that could revolutionize the financial world.

Consequently, projects don't get the right support, and this hinders development and innovation.

OUR SOLUTION

Diamond Launchpad is a platform where new projects can raise initial liquidity that will be enough to give them a head start. Our team have combined 35 years of experience in the blockchain and cryptocurrency industry, we will use strict criteria for selection of projects. Any project that makes it through our dragons den will be allowed to conduct private and presales on our platform. Shortly after successful sales, the realized liquidity are locked immediately and secured to protect the interest of our investors and liquidity providers. It is important to us that projects are audited by one of the top 5 trusted smart contract auditors, then listing follows.

IDO FUND DISTRIBUTION

10% money raised from every IDO will be used to buy back diamond token at market prize , and will be distributed to those who

provide liquidity and lock for 30 days and above. 30% of fund raise by any ido will be used to provide liquidity for the ido and lock for ever , to prevent rug pull.

50% will be given to the team to develop there product.

The remaining 10% will be used to provide grant for community members with innovative ideas

Farming & Staking	44.14%
Marketing/Team	10%

Note: marketing team will make use of their share according to decision of the community.

AMM (AUTOMATED MARKET MAKING)

Diamondswap is an AMM that will attract more liquidity to the ecosystem, it will unlock unlimited opportunities to us as more yield goes to our supporters. Traders will have varieties of liquidity pools to choose from and it will also attract partners to us.

CROSS-CHAIN INTEGRATION

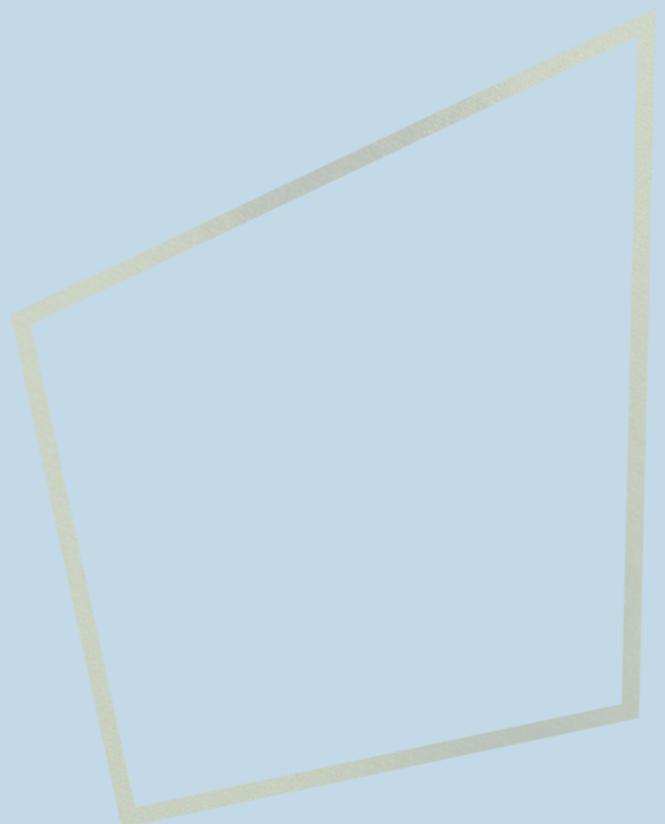

Blockchain technology adoption is rising and more solutions are coming to market on monthly basis, hence, fast adaptation is required. To expand our user base, it is paramount to consider the possibility of allowing users of other blockchains to trade on Diamondswap.

We are going to allow trading on other chains like Polkadot, Ethereum and Solana in the future. This is part of our development plans.

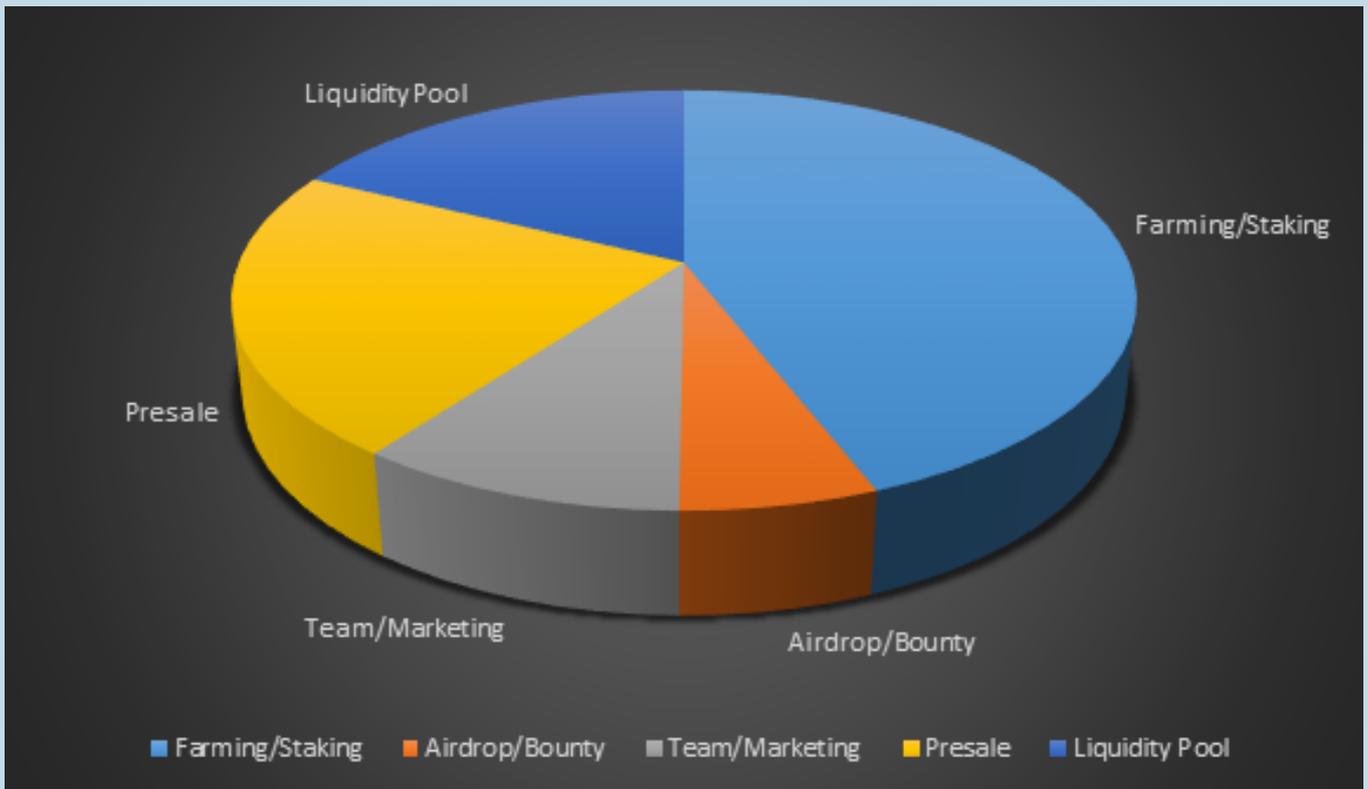

DECENTRALIZED GOVERNANCE

This is a community project, and it is fully driven by decisions of token holders and they either support or vote against all the relevant decisions. We do not allow venture capitalists to invest in the project, so no one can hijack the decision making process from the token holders. Every diamond token in the staking contract guarantees a vote, and this represent power that you have in setting direction of future development of the platform. We strongly believe in true governance.

TOKENOMICS

DIAMOND Max Supply: 5000

Presale: 1106

Staking and Farming: 2207

Team and Marketing: 500

Airdrop/Bounty: 300
